Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

## Application No. Applicant(s) 10/731,790 KILIAN ET AL. Office Action Summary Examiner Art Unit Khanh B. Pham 2166 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 15 May 2009. 2a) ☐ This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 65-78 is/are pending in the application. 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration. 5) Claim(s) \_\_\_\_\_ is/are allowed. 6) Claim(s) 65-78 is/are rejected. 7) Claim(s) \_\_\_\_\_ is/are objected to. 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are; a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some \* c) None of: Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). \* See the attached detailed Office action for a list of the certified copies not received. #### DETAILED ACTION

## Response to Arguments

### Drawings

In view of applicant's argument, the objection to Figs. 2-3 under 37 CFR 1.83 are withdrawn.

### Rejection under 35 U.S.C. §112

Rejections under 35 USC 112, 1st are withdrawn.

Rejection under U.S.C. §103

 Applicant's arguments with respect to claims 65-78 have been considered but are moot in view of the new ground(s) of rejection.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 65-78 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stuart et al., (US 2005/0055519), hereinafter Stuart in view of Margolus, (US 2004/0167898 A1), hereinafter Margolus.

Art Unit: 2166

Regarding claim 65, Stuart teaches a method for use in a computer system comprising at least one host and at least one storage system, the method comprising acts of:

- (A) receiving a request, from the host, to delete a unit of content stored on the storage system (see paragraph [0020], Figs. 4 & 9),
- (B) determining whether previously-defined retention period for the unit of content has expired; (see paragraph [0020], Figs. 4 & 9)
- (C) when it is determined in the act (B) that the retention period for the unit of content has not expired, denying the request to delete the unit of content (See paragraphs [19-20], Fig. 9); and (D) when it is determined in the act (B) that the retention period for the unit of content has expired, directly deleting the unit of content in response to the request (see paragraphs [93-94], Fig. 9).

However, Stuart does not explicitly teach "wherein a previously-defined retention period for the unit of content is stored in the unit of content, wherein the request identifies the unit of content using a content address generated, at least in part, from at least a portion of the content of the unit of content and wherein the at least a portion of the content of the unit of content period";

Margolus teaches wherein a previously-defined retention period for the unit of content is stored in the unit of content, ... and wherein the at least a portion of the content of the unit of content includes the previously-defined retention period (see paragraph [0011], particularly: "The storage system may associate an entity version with an identifier that depends on a hash of its content", "Each block may also be assigned

Art Unit: 2166

an expiration time that depends on the latest expiration times associated with versions which make reference to it", "A block may be referenced using a block name which depends upon a hash of the content of the block").

Stuart and Margolus are analogous art pertinent to the problem to be solved. A skilled artisan would have been motivated to combine Stuart and Margolus because both are directed to method for managing file retentions. Therefore at the time of invention, it would have been obvious to a person having ordinary skill in the art to combine Stuart and Margolus as suggested by Margolus in order to protect data files such that only unnecessary data can be deleted. Using the file identifier generated from the content of the file would prevent accidentally deleting files based on similar filenames.

Regarding claim 66, Stuart teaches the method, wherein the acts (A), (B) and (C) are performed by the storage system. (See paragraphs [7, 22-24]; Fig. 1)

Regarding claim 67, Stuart teaches the method, further comprising an act (D) of, prior to performing the acts (A), (B) and (C), receiving information specifying the retention period for the unit of data. (See paragraphs [32-33], Fig. 4)

Regarding claim 68, Stuart teaches the method, further comprising acts of, prior to performing the acts (A), (B) and (C):

(D) receiving the unit of data at the storage system (See paragraphs [7, 39-41]); and

Art Unit: 2166

(E) writing the unit of data to the storage system. ([8])

Regarding claim 69, Stuart teaches the method, further comprising acts of, prior to performing the acts (A), (B) and (C):

- (F) receiving information specifying the retention period for the unit of data along with the unit of data; and (Paragraphs [32-33], Fig. 4)
- (G) writing the information specifying the retention period to the storage system (paragraphs 32-42).

Regarding claim 70, Stuart teaches at least one computer readable <u>storage</u> medium encoded with instructions that, when executed on a computer system, perform a method for use in the computer system, wherein the computer system comprises at least one host and at least one storage system, and wherein the method comprises acts of

- (A) receiving a request, from the host, to delete a unit of content stored on the storage system (See paragraph [0020], Figs. 4 & 9); (See paragraph [20], Figs. 4+9)
- (B) determining whether previously-defined retention period for the unit of content has expired; (See paragraph [0020], Figs. 4 & 9)
- (C) when it is determined in the act (B) that the retention period for the unit of content has not expired, denying the request to delete the unit of content (see paragraphs [19-20], Fig. 9); and (D) when it is determined in the act (B) that the retention period for the

Art Unit: 2166

unit of content has expired, directly deleting the unit of content in response to the request (see paragraphs [93-94], Fig. 9).

However, Stuart does not explicitly teach "wherein a previously-defined retention period for the unit of content is stored in the unit of content, wherein the request identifies the unit of content using a content address generated, at least in part, from at least a portion of the content of the unit of content and wherein the at least a portion of the content of the unit of content includes the previously-defined retention period";

Margolus teaches wherein a previously-defined retention period for the unit of content is stored in the unit of content, ... and wherein the at least a portion of the content of the unit of content includes the previously-defined retention period (see paragraph [0011], particularly, "The storage system may associate an entity version with an identifier that depends on a hash of its content", "Each block may also be assigned an expiration time that depends on the latest expiration times associated with versions which make reference to it", "A block may be referenced using a block name which depends upon a hash of the content of the block").

Stuart and Margolus are analogous art pertinent to the problem to be solved. A skilled artisan would have been motivated to combine Stuart and Margolus because both are directed to method for managing file retentions. Therefore at the time of invention, it would have been obvious to a person having ordinary skill in the art to combine Stuart and Margolus as suggested by Margolus in order to protect data files such that only unnecessary data can be deleted. Using the file identifier generated from

Art Unit: 2166

the content of the file would prevent accidentally deleting files based on similar filenames.

Regarding claim 71, Stuart teaches the at least one computer readable <u>storage</u> medium, wherein the acts (A), (B) and (C) are performed by the storage system (See paragraphs [7, 22-24]; Fig. 1).

Regarding claim 72, Stuart teaches the at least one computer readable <u>storage</u> medium, further comprising an act (D) of, prior to performing the acts (A), (B) and (C), receiving information specifying the retention period for the unit of data.

Regarding claim 73, Stuart teaches the at least one computer readable <u>storage</u> medium, further comprising acts of, prior to performing the acts (A), (B) and (C): (See paragraphs [32-33], Fig. 4)

- (D) receiving the unit of data at the storage system (See paragraphs [7, 39-41]); and
- (E) writing the unit of data to the storage system. ([8])

Regarding claim 74, Stuart teaches the at least one computer readable medium, further comprising acts of, prior to performing the acts (A), (B) and (C):

- (F) receiving information specifying the retention period for the unit of data along with the unit of data; and (Paragraphs [32-33], Fig. 4)
- (G) writing the information specifying the retention period to the storage system.
  (Paragraphs 32-42)

Art Unit: 2166

Regarding claim 75, Stuart teaches a storage system for use in a computer system comprising at least one host and the storage system, the storage system comprising: at least one storage device to store data received from the at least one host (See paragraph [0020], Figs. 4 & 9); and at least one controller that; receives a request, from the host, to delete a unit of data stored on the storage system (See paragraph [0020], Figs. 4 & 9), wherein a previously-defined retention period for the unit of content, determines whether the previously-defined retention period for the unit of data has expired; when it is determined that the retention period for the unit of data has not expired, denies the request to delete the unit of data (See paragraphs [19-20], Fig. 9); and when it is determined that the retention period for the unit of content has expired, directly deletes the unit of content in response to the request. (See paragraphs [93-94], Fig. 9)

Stuart does not explicitly teach "wherein a previously-defined retention period for the unit of content is stored in the unit of content, wherein the request identifies the unit of content using a content address generated, at least in part, from at least a portion of the content of the unit of content and wherein the at least a portion of the content of the unit of content includes the previously-defined retention period";

Margolus teaches wherein a previously-defined retention period for the unit of content is stored in the unit of content, ... and wherein the at least a portion of the content of the unit of content includes the previously-defined retention period (see paragraph [0011], particularly, "The storage system may associate an entity version with an identifier that depends on a hash of its content", "Each block may also be assigned

Art Unit: 2166

an expiration time that depends on the latest expiration times associated with versions which make reference to it", "A block may be referenced using a block name which depends upon a hash of the content of the block").

Stuart and Margolus are analogous art pertinent to the problem to be solved. A skilled artisan would have been motivated to combine Stuart and Margolus because both are directed to method for managing file retentions. Therefore at the time of invention, it would have been obvious to a person having ordinary skill in the art to combine Stuart and Margolus as suggested by Margolus in order to protect data files such that only unnecessary data can be deleted. Using the file identifier generated from the content of the file would prevent accidentally deleting files based on similar filenames.

Regarding claim 76, Stuart teaches the storage system, wherein the at least one controller receives information specifying the retention period for the unit of data (see paragraphs [7, 22-24]; Fig. 1).

Regarding claim 77, Stuart teaches the storage system, wherein the at least one controller receives the unit of data and writes the unit of data to the at least one storage device (see paragraphs [32-33], Fig. 4).

Regarding claim 78, Stuart teaches the storage system, wherein the at least one controller receives information specifying the retention period for the unit of data along

Art Unit: 2166

with the unit of data and writes the information specifying the retention period to the at least one storage device

(paragraphs 32-42).

### Conclusion

Examiner's Note: Examiner has cited particular columns and line numbers in the references applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the Examiner.

In the case of amending the Claimed invention, Applicant is respectfully requested to indicate the portion(s) of the specification which dictate(s) the structure relied on for proper interpretation and also to verify and ascertain the metes and bounds of the claimed invention.

The prior art made of record, listed on form PTO-892, and not relied upon, if any, is considered pertinent to applicant's disclosure.

Art Unit: 2166

If a reference indicated as being mailed on PTO-FORM 892 has not been enclosed in this action, please contact Lisa Craney whose telephone number is (571) 272-3574 for faster service.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh B. Pham whose telephone number is (571) 272-4116. The examiner can normally be reached on Monday through Friday 7:30am to 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain Alam can be reached on (571) 272-3978. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
